Work Breakdown Structure

Github link: https://github.com/liaojialue/COMP1044_CW_G45

Task \ Students name	Liao Jialue	Chen Guanyi	Sun Rongliang
Front-End Development			
User Management	Designed login page and admin dashboard UI	Created student management form UI	Created assessor account page UI and tested navigation
Internship Management	Designed internship assignment page	Created company details input form	Improved page layout and tested internship pages
Internship Result Entry and Mark Calculation	Designed mark entry form	Added 8 assessment score input fields	Added validation messages and tested score input
Result Viewing	Designed result table page	Added search bar UI	Improved result page styling and tested result display
Back-End Development			
User Management	Implemented login authentication using PHP	Implemented student add/update/ delete functions	Implemented assessor account management and tested CRUD
Internship Management	Implemented student-assessor assignment	Saved company name and internship details into database	Wrote database queries and tested insert/update functions
Internship Result Entry and Mark Calculation	Implemented mark submission function	Implemented weighted final mark calculation	Saved comments/feedback and tested calculation accuracy
Result Viewing	Implemented admin view all results function	Implemented assessor view assigned results function	Added search/filter SQL queries and tested result retrieval
Database Design	Designed ERD entities and relationships	Created MySQL tables with primary keys and foreign keys	Inserted sample data and checked database consistency
Testing and Documentation	Tested full system flow	Prepared WBS and checked file naming	Recorded video demo and checked final ZIP structure

MARKING CRITERIA/RUBRIC

Assessment Criteria and Marking Overview Tasks	Marks given	Marks awarded
1. ER diagram • Proper use of entities, attributes, relationships, and cardinalities • Logical Structure & Normalisation • Correct use of crow's foot notation • Clarity and proper labeling	15	
2. Database implementation • Table structure matches design • Correct use of primary keys, foreign keys, and constraints • Referential integrity enforced • Logical and meaningful sample data	10	
3. Demonstration video • Demonstrates all major functions • Explains the key technical elements • Timing (5 minutes)	10	
4. Front-End Development • Clean, responsive, and user-friendly UI (HTML, CSS) • Consistency across pages • Input validation and error handling implemented	15	
5. Backend and Integration • Proper use of PHP for database communication • Smooth interaction between front-end and database for fetching/updating data	15	
6. Functionality • All required features are implemented • The system runs smoothly without errors, crashes, or unexpected behavior • Implementation of extra features beyond the requirement • Unique solution	20	
7. Individual contribution • Clear evidence of individual effort in development tasks	15	
Total marks	**100**
